QX SERIES

QUICK START GUIDE

1. Connect the amplifier to the mains – the blue LED should light up immediately. If different status appears, please refer to the list to the right.
2. Check the **Gain Setting** (pot/trimmer) and position of switches (LPF/HPF/Limiter/Auto-Standby). These can be found hidden behind the grille.
3. Connect **Analogue Inputs** (analogue version) or **Digital Inputs** (digital version) and play signal. The green LED should start flashing.
4. With no signal present and **Auto-Standby** turned **ON**, the amp will go into **Mute Mode** after 10 minutes, then into **Standby Mode** after 30 minutes.
